\*In 4th gear. <sup>0</sup>Ford test figures. All petrol engines are equipped with a catalytic converter.

<sup>#</sup>Represents the lightest kerbweight assuming driver at 75 kg, full fluid levels and 90% fuel levels, subject to manufacturing tolerances and options, etc., fitted. Towing limits quoted represent the maximum towing ability of the vehicle at its gross vehicle mass to restart on a 12 per cent gradient at sea level. The performance and economy of all models will be reduced when used for towing. Tongue load is a maximum of 100 kg on all models. Gross train mass includes trailer weight.

<sup>00</sup>The declared fuel/energy consumptions, CO<sub>2</sub> emissions and electric range are measured according to the technical requirements and specifications of the European regulations (EC) 715/2007 and (EC) 692/2008 as last amended. Fuel consumption and CO<sub>2</sub> emissions are specified for a vehicle variant and not for a single car. The applied standard test procedure enables comparison between different vehicle types and different manufacturers. In addition to the fuel efficiency of a car, driving behaviour as well as other non-technical factors play a role in determining a car's fuel/energy consumption, CO<sub>2</sub> emissions and electric range. CO<sub>2</sub> is the main greenhouse gas responsible for global warming. A guide on fuel economy and CO<sub>2</sub> emissions which contains data for all new passenger car models is available at any point of sale free of charge or can be downloaded under <http://carfueldata.dft.gov.uk>.
